

## Saving and opening your pdf pattern correctly!

The first thing that you want to do after you have downloaded your sewing journal is removing it from your Downloads, and save it into a new folder on your computer. often when you download something, a linked button appears at the bottom of your browser (Chrome, Safari etc) screen. When you click on this button, the file will open, but it will open in your browser.

The printing settings for browsers can be quite limited, and often the correct printing options do not exist. So make sur to copy and paste your sewing journal form the Downloads folder into a new folder.

Then you can right click on the file and choose Open With... Adobe Acrobat Reader.

## Selecting your body type

In the sewing journal there are included 3 different body types. You will have to turn off the body types you don't want to print

In Adobe Reader, you can open the Layers panel and turn body type on and off by clicking on the eye icon or like at the photo below the check marks.

The same goes with the cut marks. if you want to remove them, just turn off the layer.
